

Profile

Healthcare data analyst, with experience working across biological and pharmacovigilance datasets to generate evidence for population-health and medication-safety priorities. Skilled in R and Python, with a record of building reproducible analytical pipelines and creating dashboards, with full and unrestricted right to work in the UK.

Skills

Health System & Policy Context: UK health system fundamentals (NHS, NICE, HTA); cost-effectiveness analysis (CEA/CUA).

Data Quality & Statistics: Data cleaning, QC and validation, logistic regression, survival analysis, Fisher's exact test.

Programming & Tools: R, Python, SQL, Microsoft Office (Excel), Git version control, Machine Learning workflows.

AI Tools: Claude for code development, debugging, literature review and research summarisation.

Languages: English (Bilingual proficiency), French (Full professional proficiency), and Arabic.

Education Experience

Philosophy Education

London, United Kingdom

Supply Teaching Assistant

Apr 2026 – Present

- Supporting students, including special educational needs students, across multiple London schools, explaining concepts clearly and adapting communication to individual learning needs.
- Assisting teachers with behaviour management, helping to keep pupils on task and maintain a focused learning environment.

Experience

Queen Mary, University of London

London, United Kingdom

Data Analyst/Scientist (Fixed Term Contract)

Mar 2025 – Aug 2025

- Built a multi-source pipeline using programming language (Python, R), integrating several biological (Open Targets, IMPC) and pharmacovigilance data (MHRA Yellow Card).
- Analysed adverse-reaction reporting data using descriptive statistics and statistical testing to generate clinical insights around drug safety patterns, supporting public health research.
- Reviewed literature to extract comparable adverse event data, benchmarking findings against results for evidence validity.
- Applied full Git/GitHub version control across all analysis, ensuring transparent, open and reproducible analytical workflows.
- Prepared presentations and output reports periodically to communicate analytical findings to clinicians, researchers, and managers.

Queen Mary, University of London

London, United Kingdom

Postgraduate Research Assistant

Jun 2024 – Dec 2024

- Cleaned and quality controlled nationwide genomic dataset covering 4000+ patients, identifying and resolving data issues, including inconsistencies, missing values, and format conflicts.
- Applied statistical modelling: logistic regression to predict clinical phenotypes and Fisher's exact tests to identify associations between clinical variables.
- Reviewed literature on child neurodevelopmental disorders to inform study design, choice of analytical approach and interpretation of neurodevelopmental phenotypes.

Ministry of Public Health

Beirut, Lebanon

Pharmacovigilance Assessor

Dec 2021 – Dec 2023

- Conducted systematic literature searches and reviews using PubMed, Embase, and other scientific databases to identify adverse drug reactions and safety.
- Screened scientific publications against protocol-defined eligibility criteria and extracted relevant safety data for pharmacovigilance assessment.
- Entered, coded and maintained individual case safety reports in the national pharmacovigilance database.
- Produced adverse events reports, translating clinical information on regimens, toxicity and safety.

Education

MSc Genomic Medicine, Queen Mary University of London (Distinction)

Jan 2024 – Jan 2025

Modules: Genetic Counselling; Genomics of Common and Rare Inherited Disease; Ethical, Legal and Social Issues in Healthcare.

BSc Pharmacy, Lebanese International University

Oct 2011 – Jul 2018

Modules: Pharmacogenomics, Statistics for Health Sciences; Epidemiology.
